

Deciding which model is right for you...

COMPLETELY-IN-THE-CANAL

The CIC is the smallest available model and is almost invisible in the ear!

MINI CANAL

The Mini Canal is slightly smaller than the canal and very appropriate for smaller ears. It uses a 10A battery and features a user adjustable volume control.

CANAL

The Canal style instrument is a very popular model and may be more cosmetically appealing in most ears. Its size allows for more options than the CIC or Mini Canal.

HALF SHELL

The Half Shell offers cosmetic appeal and room for a full range of options.

FULL SHELL

This model may be easier to handle and provides space for additional options, which your hearing professional may recommend.

In addition to our custom instruments:

BEHIND-THE-EAR

BTE hearing instruments provide an option which may be most appropriate for you.

*Hearing instrument colors and size may vary.
Hearing instruments are not to scale.*

Your hearing professional will help you decide which model will best meet your needs.

Since its founding in 1964, Electone has proudly served the Hearing Healthcare Industry with a consistent and dedicated focus on providing top quality hearing instruments backed by the most comprehensive warranty available. Computerized design and rigid manufacturing standards assure the precision instruments you require. All production processes meet or exceed FDA Quality System regulation (21 CFR §820) for the manufacture of medical devices. Electone has achieved ISO 9001/EN 46001 certification.

Electone is headquartered in a 35,000 sq. ft. building in Orlando, Florida and distributes its products worldwide.

You can be proud of your decision to purchase Electone hearing instruments and confident they will serve you well for years to come.

Electone hearing instruments are custom designed to meet individual hearing needs. They cannot restore hearing to normal or retard the progression of hearing loss. Overall benefit varies according to the listening environment, proper fit, frequency of use, characteristics and severity of loss, as well as accuracy of patient evaluation.

These instruments are just one component of a more comprehensive aural rehabilitation process. Consult your hearing professional for further guidance.

Aurora[®] 4
FOUR-CHANNEL DIGITAL

*The day just
got better*

better hearing

better day

Introducing Aurora 4, a fully digital, four-channel programmable hearing instrument. It is a 100% digital signal processing circuit, which means superior sound quality. It has four channels, which means greater fitting flexibility. It's programmable, which means that your hearing care professional has the ability to more precisely meet your hearing needs.

Aurora 4 incorporates input and output compression functions and an adaptive Active Noise Suppression System which means that while you will be able to hear soft sounds, excessively loud sounds won't inhibit your listening enjoyment. The addition of an optional Directional Microphone System, if appropriate for your specific needs, may significantly improve your ability to understand speech in noisy situations.

Aurora 4 also offers user-friendly features to make your listening experience more enjoyable. An optional multiple memory function allows your hearing care professional to program up to three situation settings. A beep will conveniently signal when you change memories and another beep will signal when your hearing instrument battery needs replacing. Adding an optional programmable telecoil - switchless or conventional - may make telephone use easier.

These outstanding features make Aurora 4 a hearing instrument that you can wear with confidence.

Aurora 4 Features:

- 100% digital signal processing
- Four channels for greater fitting flexibility
- Programmable
- Active Noise Suppression System
- Feedback management
- Microphone Noise Reduction
- Multi-memory: Up to 3 memories available
- Memory and low battery beeps
- Directional Microphone System (optional)
- Programmable telecoil - switchless or conventional (optional)
- Available in all custom sizes and a behind-the-ear instrument

***We're sure you'll agree...
the day just got better.***
